

Designed for use subsea, and remote operated through ROV.

Description:

To be operated and connected to the ROV system, alternative separate HPU and Control system (listed as options). The Torque tool give full control on torque and turns, that way can the operator set correct torque and turns to avoid overload of the object. Display shows exact torque and turns with an accuracy of +/-3,5%. Separate validation unit unnecessary. Display data can be transferred visually through the ROV camera or electronically through the control system to the operator. Depro software gives a user-friendly documentations and data connected to work performed.

Specification:

Standards: ISO 13628-8, API 17D

Torque range: 0-2700 Nm.

Max hydraulic pressure 207 bar

Flow: 5-20l/min (20 l/min = 14RPM (DEP-GA-0542) = 5RPM (DEP-GA-00543))

Weight in air / water: 45/36Kg.

Max water dept: 3000 m

Dimensions LxHxW: 473x385x309 mm.

Nose Ø150 mm x 180 mm.

Depro Drawing: DEP-GA-0542 (direct powered) / DEP-GA-0543 (with B-Type receptacle)

Tools designed for submersion over long periods on request.

Tool adapters, verification units, control systems etc. see specific datasheets.
