

USED IN PROJECTS WORLDWIDE

Depro AS is a well recognised manufacturer of subsea tooling for companies in the oil and gas industry worldwide.

RENT STANDARD SUBSEA TOOLS

Depro AS has a wide range of standard subsea tools for rent. There are several benefits by renting the tools direct from the manufacturer.

RENT ROV TOOLS DIRECT FROM THE MANUFACTURER

EXAMPLES OF RENTAL PRODUCTS

TORQUE TOOL

Torque Tool Class 1-7

Depro provides a wide range of Torque Tools to match all relevant interfaces in the industry. Standard interfaces available as rental products.

VERIFICATION UNIT

Verification unit for rental Torque Tools

The unit is made to verify correct torque before performing subsea operations.

CONTROL SYSTEM

Tool Control Unit (TCU) and HMI case

The Control System helps to optimize tool performance and at the same time secure valuable data from operations performed.

Rent standard Subsea Tools

Depro AS has a wide range of standard Subsea Tools for rent.

The standard products we have for rent are developed for harsh conditions and long life. They have been used for a long time by well-known international companies.

Many customers see a rental solution as more attractive than buying a product. Depro provides this service, and most of our products can be rented. Benefits of rental solutions are reduced capital expenditure, reduced space for storage and maintenance, and reduced risk of failure during the operation of older tools.

HOT STAB

Hot Stab systems 1, 2 and 4 ports

Depro provides a wide range of Hot Stabs to match all relevant interfaces in the industry. Standard interfaces available as rental products.

HPU

Hydraulic Power Unit

5 independent lines, 160l oil reservoir, electrical motor 400V 3 phase, 50Hz, 18,5kW. We have several units available, including an HPU for Oceanic fluid.

EDM TOOL

Electrical Discharge Machining (EDM)

This tool is using electricity to remove steel material. The method has its highest benefit on high grade material. The rental tool is delivered with supporting ROV skid, providing fresh water and electrical power.

BUDDY ROV

Electrical Observation ROV & E-TMS

Depro delivers a compact buddy ROV skid for a work class ROV system. It is easy to operate and gives the ROV operator better visual control.

Benefits of renting

- ✓ Reduced capital expenditure
- ✓ Reduced space for storage and maintenance
- ✓ Reduced risk of failure when renting from the manufacturer

Contact us

We have extensive experience in developing products for subsea use, products to withstand harsh environments.

Depro AS is located 30 minutes drive from the energy capital of Norway, Stavanger, and 20 minutes from Stavanger Airport Sola.

We specialise in the constructing functional and cost-efficient tooling. We pride ourselves on providing supreme quality and design for leading clients worldwide.
